Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

Big Picture Pedagogy: Finding Interdisciplinary Solutions to Common Learning Problems Regan A. R. Gurung 2017-10-16 Take a big-picture look at teaching and learning. Building on existing pedagogical research, this volume showcases the scholarship of teaching and learning (SoTL) across the disciplines--and takes it in a new direction. In each chapter, interdisciplinary teams of authors address a single pedagogical question, bringing each of their home disciplines specific literature and methodologies to the table. The result is a fresh examination of evidence-based practices for teaching and learning in higher education that is intentionally inclusive of faculty from different disciplines. By taking a closer, more systematic look at the pedagogies used within the disciplines and their impacts on student learning, the authors herein move away from more generic teaching tips and generic classroom activities and toward values, knowledge, and manner of thinking within SoTL itself. The projects discussed in each chapter, furthermore, will provide models for further research via interdisciplinary collaboration. This is the 151st volume of this Jossey-Bass higher education series. It offers a comprehensive range of ideas and techniques for improving college teaching based on the experience of seasoned instructors and the latest findings of educational and psychological researchers.

Recruiting, Retaining, and Engaging African-American Males at Selective Public Research Universities Louis A. Castenel 2018-06-01 A problematic, yet uncommon, assumption among many higher education researchers is that recruitment, retention, and engagement of African-American males is relatively similar and stable across all majority White colleges and universities. In fact, the harsh reality is that selective public research universities (SPRUs) have distinctive academic cultures that increase the difficulty of diversifying their faculty and student populations. This book will discuss how traditions and elitist assumptions make it very difficult to recruit, retain, and engage African-American males. The authors will examine these issues from multiple perspectives in three sections that highlight research, policies and practices impacting the experiences of African American males, including Pre-Collegiate Preparation, African American Male Student Athletes, and Undergraduate and Graduate Considerations for African American Male Initiatives.

Understanding the Educational and Career Pathways of Engineers National Academy of Engineering 2019-01-26 Engineering skills and knowledge are foundational to technological innovation and development that drive long-term economic growth and help solve societal challenges. Therefore, to ensure national competitiveness and quality of life it is important to understand and to continuously adapt and improve the educational and career pathways of engineers in the United States. To gather this understanding it is necessary to study the people with the engineering skills and knowledge as well as the evolving system of institutions, policies, markets, people, and other resources that together prepare, deploy, and replenish the nation’s engineering workforce. This report explores the characteristics and career choices of engineering graduates, particularly those with a BS or MS degree, who constitute the vast majority of degreed engineers, as well as the characteristics of those with non-engineering degrees who are employed as engineers in the United States. It provides insight into their educational and career pathways and related decision making, the forces that influence their decisions, and the implications for major elements of engineering education-to-workforce pathways.

Reinforcement Learning, second edition Richard S. Sutton 2018-11-13 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field’s key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning’s relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson’s wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Parting the Clouds - the Science of the Martial Arts Grenville Harrop 2011-12 This is a book that's long overdue: One that provides information that has never before been published, compiled or analyzed in a way that’s designed to help fighters. This is a guide to the science of kicking and punching that can settle the debates about which techniques are the most effective and why. It will help a fighter to fight, an instructor to teach and martial artists to advance by working things out for themselves. There is no magic involved in the martial arts. The force and power that is displayed by an expert fighter is the consequence of rigorous training in the accurate application of physical laws. Understanding how to use these laws of physics to create massive impact forces will provide a personal insight into the practice of correct technique and form. This unique piece of work will act as a technical reference that provides the facts and figures that fighters seek, including records of the maximum force and speed achieved by some of the best present day warriors, helping to answer many of the most difficult questions in the martial arts.
