Leibniz's Key Philosophical Writings

Paul Lodge 2020-10-15 Gottfried Wilhelm Leibniz (1646-1716) is one of the most important and influential philosophers of the modern period. He offered a wealth of original ideas in metaphysics, epistemology, ethics, and philosophical theology, among them his signature doctrines on substance and monads, pre-established harmony, and optimism. This volume contains introductory chapters on eleven of Leibniz's key philosophical writings, from youthful works ("Confessio philosophi", "De summa rerum"), seminal middle-period writings ("Discourse on Metaphysics", "New System"), to masterpieces of his maturity ("Monadology", "Discourse on the Natural Theology of the Chinese"). It also covers his two main philosophical books (New Essays on Human Understanding and Theodicy), and three of his most important philosophical correspondences with Antoine Arnauld, Burcher De Volder, and Samuel Clarke. Written by internationally-renowned experts on Leibniz, the chapters offer clear, accessible accounts of the ideas and arguments of these key writings, along with valuable information about their composition and context. By

focusing on the primary texts, they enable readers to attain a solid understanding of what each text says and why, and give them the confidence to read the texts themselves.

Offering a detailed and chronological view of Leibniz's philosophy and its development through some of his most important writings, this volume is an invaluable guide for those encountering Leibniz for the first time.

Confessio Philosophi Gottfried Wilhelm Leibniz 2005-01-01 This volume contains papers that represent Leibniz's early thoughts on the problem of evil, centring on a dialogue, the *Confessio philosophi*, in which he formulates a general account of God's relation to sin and evil that becomes a fixture in his thinking. How can God be understood to be the ultimate cause, asks Leibniz, without God being considered as the author of sin, a conclusion incompatible with God's holiness? Leibniz's attempts to justify the way of God to humans lead him to deep discussion of related topics: the nature of free choice, the problems of necessitarianism and fatalism, the

nature of divine justice and holiness. All but one of the writings presented here are available in English for the first time.

Wireless Sensor Networks Holger Karl
2011-05-02

With great pleasure we welcomed the attendees to EWSN2004, the 1st European Workshop on Wireless Sensor Networks, held in the exciting and lively city of Berlin. Wireless sensor networks are a key technology for new ways of interaction between computers and the physical environment which surrounds us. Compared to traditional networking technologies, wireless sensor networks are faced with a rather unique mix of challenges: scalability, energy efficiency, self-configuration, constrained computation and memory resources in individual nodes, data-centricity, and interaction with the physical environment, to name but a few. The goal of this workshop is to create a forum for presenting new results in the flourishing field of wireless sensor networks. By bringing together academia and industry we hope to

stimulate new opportunities for collaborations. In compiling the scientific program we have been quite selective. Thanks to the efforts of 90 reviewers who delivered 252 reviews for the 76 papers originally submitted from all over the world, a strong selection of the 24 best contributions was made possible. The Technical Program Committee created an outstanding program covering the broad scope of this highly interdisciplinary field: from distributed signal processing through networking and middleware issues to application experience. Running such a workshop requires dedication and much work from many people. We want to thank in particular Petra Hutt, Irene Ostertag and Heike Klemz for their valuable and esteemed help in the local organization of this workshop. We hope that you enjoy this volume, and if you were lucky enough to attend we hope that you enjoyed the discussions with colleagues working in this fascinating area.
