Greyhound Scenicruiser Tom McNally 2013-03-01 When we deem things iconic, they have naturally become part of history and have earned a permanent status of importance to us—one such object is a particular intercity coach, the Greyhound PD-4501 Scenicruiser bus, built by the GM Corporation during 1954-'56. After nearly 60 years, its popularity, even today, is almost cult-like. Throughout the history of intercity coaches in the U.S., there have not been more toys, advertising pieces, souvenirs, or memorabilia centered on any other bus. The Scenicruiser starred in several movies, was featured on record album covers, and appeared on endless TV shows through the years. Starting with prototypes, this book covers all the various models of the Scenicruiser's heritage, and even highlights many of the restored and still operating legends today.

Tractors Nick Baldwin 2011-11-20 Steam, and then cumbersome motor, tractors existed in small numbers before 1914, after which the need to produce more foods using less horse and man power saw the origins of the machine we know today. Thanks to mass production, Ford brought the price down to suit average farmers, and in the 1920s to 1940s numerous rivals brought in such novelties as diesel engines, pneumatic tyres, hydraulic implement lifts and even cost-effective all-wheel drive and weather protection. After the Second World-War, a strong new indigenous tractor industry was led by Ferguson, David Brown, Nuffield and Ford. This book highlights these developments and goes on to show the dramatic improvements of the 1950s and 1960s.

[Robert Smithson](#) Ann Reynolds 2004-10-01 An examination of the interplay between cultural context and artistic practice in the work of Robert Smithson. Robert Smithson (1938-1973) produced his best-known work during the 1960s and early 1970s, a period in which the boundaries of the art world and the objectives of art-making were questioned perhaps more consistently and thoroughly than any time before or since. In Robert Smithson, Ann Reynolds elucidates the complexity of Smithson's work and thought by placing them in their historical context, a context greatly enhanced by the vast archival materials that Smithson's widow, Nancy Holt, donated to the Archives of American Art in 1987. The archive provides Reynolds with the remnants of Smithson's working life—magazines, postcards from other artists, notebooks, and perhaps most important, his library—from which she reconstructs the physical and conceptual world that Smithson inhabited. Reynolds explores the relation of Smithson's art-making, thinking about art-making, writing, and interaction with other artists to the articulated ideology and discreet assumptions that determined the parameters of artistic practice of the time. A central focus of Reynolds's analysis is Smithson's fascination with the blind spots at the center of established ways of seeing and thinking about culture. For Smithson, New Jersey was such a blind spot, and he returned there again and again—alone and with fellow artists—to make art that, through its location alone, undermined assumptions about what and, more important, where, art should be. For those who guarded the integrity of the established art world, New Jersey was "elsewhere"; but for Smithson, "elsewheres" were the defining, if often forgotten, locations on the map of contemporary culture.

[The Bottom Billion](#) Paul Collier 2007-05-25 In the universally acclaimed and award-winning The Bottom Billion, Paul Collier reveals that fifty failed states--home to the poorest one billion people on Earth--pose the central challenge of the developing world in the twenty-first century. The book shines much-needed light on this group of small nations, largely unnoticed by the industrialized West, that are dropping further and further behind the majority of the world's people, often falling into an absolute decline in living standards. A struggle rages within each of these nations between reformers and corrupt leaders--and the corrupt are winning. Collier analyzes the causes of failure, pointing to a set of traps that ensnare these countries, including civil war, a dependence on the extraction and export of natural resources, and bad governance. Standard solutions do not work, he writes; aid is often ineffective, and globalization can actually make matters worse, driving development to more stable nations. What the bottom billion need, Collier argues, is a bold new plan supported by the Group of Eight industrialized nations. If failed states are ever to be helped, the G8 will have to adopt preferential trade policies, new laws against corruption, new international charters, and even conduct carefully calibrated military interventions. Collier has spent a lifetime working to end global poverty. In The Bottom Billion, he offers real hope for solving one of the great humanitarian crises facing the world today. "Set to become a classic. Crammed with statistical nuggets and common sense, his book should be compulsory reading." --The Economist "If Sachs seems too saintly and Easterly too cynical, then Collier is the authentic old Africa hand: he knows the terrain and has a keen ear.... If you've ever found yourself on one side or

the other of those arguments--and who hasn't?--then you simply must read this book." --Niall Ferguson, The New York Times Book Review
"Rich in both analysis and recommendations.... Read this book. You will learn much you do not know. It will also change the way you look at the tragedy of persistent poverty in a world of plenty." --Financial Times

The Discipline of Organizing: Informatics Edition Robert J. Glushko 2016-08-05 We organize things. We organize information, information about things, and information about information. Organizing is a fundamental issue in many professional fields, but these fields have only limited agreement in how they approach problems of organizing and in what they seek as their solutions. This framework is robust and forward-looking, enabling effective sharing of insights and design patterns between disciplines that weren't possible before. The 4th edition of this award-winning and widely adopted text adds content to bridge between the foundations of organizing systems and the new statistical and computational techniques of data science

because at its core, data science is about how resources are described and organized. The 4th edition reframes descriptive statistics as organizing techniques, expands the treatment of classification to include computational methods, and incorporates many new examples of data-driven resource selection, organization, maintenance, and personalization. The Informatics edition contains all the new content related to data science, but omits the discipline-specific content about library science, museums, and document archives.

20,000 Miles South Helen Schreider 2017-07-31 Helen and Frank Schreider were true adventurers. Their dream was to drive the length of the Americas, from the town of Circle, Alaska (just outside the Arctic Circle), to the world's southernmost town, Ushuaia, in Tierra del Fuego. Dinah, their German shepherd, went with them. They are the first people in history to have made this trip. They came back with a whale of a story. The seagoing and mountain-climbing abilities of their amphibious jeep, La Tortuga, were put to a rugged test during the eighteen thrill-packed months the Schreiders were under way. They didn't just drive from Circle to Ushuaia—much of the way there are no roads. Many of the rivers that slice through the jungle are unbridged; the jungle itself often rears up in an impenetrable wall, and the natives just shake their heads and say, “Turn back.” Undaunted, the Schreiders hacked their way with machetes through the steaming jungles of southern Mexico, were forced to put out through the monstrous surf into the far from pacific Pacific, island-hopped across the reef-ribbed Caribbean, rode out a hurricane at sea, and crawled to almost sixteen thousand feet in the Peruvian Andes. They are the first to have reached South America in a wheeled vehicle under its own power. La Tortuga served them well and came away with her share of honors: she's the first “ship” ever to have been weighed in on dry land for passage through the Panama Canal and to have driven up to the port captain's door to pick up her pilot. 20,000 MILES SOUTH is a book filled with the happy glow of discovery, the ease, charm, and determination of its young authors, and the fascinations and romance of faraway places.
