Conserving Cultural Landscapes Ken Taylor 2014-09-19 New approaches to both cultural landscapes and historic urban landscapes increasingly recognize the need to guide future change, rather than simply protecting the fabric of the past. Challenging traditional notions of historic preservation, *Conserving Cultural Landscapes* takes a dynamic multifaceted approach to conservation. It builds on the premise that a successful approach to urban and cultural landscape conservation recognizes cultural as well as natural values, sustains traditional connections to place, and engages people in stewardship where they live and work. It brings together academics within the humanities and humanistic social sciences, conservation and preservation professionals, practitioners, and stakeholders to rethink the meaning and practice of cultural heritage conservation, encourage international cooperation, and stimulate collaborative research and scholarship.

Climate Change, Security Risks and Conflict Reduction in Africa Charlène Cabot 2016-11-04 Millions of people are already affected by weather-related shocks every year in West Africa and climate change is highly likely to increase these threats. In the wake of climate change, rising temperatures, increasingly irregular rainfall and more frequent natural hazards will endanger the ways of life of vulnerable population groups in this region and destabilize their human security. A surge in violence and conflicts could take place. One of the conflict constellations could be between farmers and herders. These groups are highly vulnerable to climate change due to their dependence on natural resources for their subsistence.

Furthermore, they are historically prone to enter into conflict over issues of access to natural resources. However, social, economic and political circumstances fundamentally influence environmental conflicts. There might thus be opportunities to face the societal challenges of climate change in a peaceful way and the political and institutional framework could play an important role in reducing conflict and violence. In order to explore such a path, this study analyses the potential of political factors (policies and institutions) for the reduction of climate-change-induced or aggravated conflicts between farmers and herders. Manual of Romance Phonetics and Phonology Christoph Gabriel 2021-11-22 This handbook is structured in two parts: it provides, on the one hand, a comprehensive (synchronic) overview of the phonetics and phonology (including prosody) of a breadth of Romance languages and focuses, on the other hand, on central topics of research in Romance segmental and suprasegmental phonology, including comparative and diachronic perspectives. Phonetics and phonology have always been a core discipline in Romance linguistics: the wide synchronic variety of languages and dialects derived from spoken Latin is extensively explored in numerous corpus and atlas projects, and for quite a few of these varieties there is also more or less ample documentation of at least some of their diachronic stages. This rich empirical database offers excellent testing grounds for different theoretical approaches and allows for substantial insights into phonological structuring as well as into (incipient, ongoing, or concluded) processes of phonological change. The volume can be read both as a state-of-the-art report of research in the field and as a manual of Romance languages with special emphasis on the key topics of phonetics and phonology.

Sustainable Living with Environmental Risks Nobuhiro Kaneko 2014-03-11 We are not free from environmental risks that accompany the development of human societies. Modern economic development has accelerated environmental pollution, caused loss of natural habitats, and modified landscapes. These environmental changes have impacted natural systems: water and heat circulation, nutrient cycling, and biodiversity. These changes in natural systems degrade ecosystem services and subsequently increase environmental risks for humans. Environmental risks, therefore, are not only human health risks by pollution, climatic anomalies and natural disasters, but also degradation of ecosystem services on which most people are relying for their lives. We cannot entirely eliminate the risks, because it is not possible to attain zero impact on the environment, but we need to find a mechanism that minimizes environmental risks for human sustainably. This is the idea of the interdisciplinary framework of "environmental risk management" theory, which advocates harmony between economic development and environmental conservation. Based on this theory, the Sustainable Living with Environmental Risk (SLER) programme, adopted by the Japanese Ministry of Education (MEXT) as one of its strategic programmes, has been training graduate students at the Yokohama National University, Japan, from 2009 to 2013 to become future environmental leaders who will take the initiative in reducing the level of environmental risks and in protecting natural resources in the developing nations of Asia and Africa. This book provides students and teachers of this new academic field with a comprehensive coverage of case studies of environmental risks and their practical management technologies not only in Japan but also in developing nations in Asia and Africa.

Monitoring Land Subsidence Using Remote Sensing Massimo Fabris 2021-09-06 In this book are reported nine works related to land subsidence monitoring using remote sensing techniques. Land subsidence is a common phenomenon in many regions of the world, where it causes degradation of local ecosystems and disruption of economic activities. Its effects are more evident in densely populated areas in particular in low-lying territories such as river deltas and coastal areas where the combination of land subsidence and sea level rise increases the flooding risk. For this reason, the monitoring of ground deformations is a crucial step to obtain important information for the development of risk mitigation strategies. In the presented papers, the characteristics of land subsidence occurring in different study areas are described, and recent developments in the used methodologies for the monitoring of the ground displacements are discussed and validated also by means of ground-based data. Moreover, advantages and disadvantages of the adopted techniques are highlighted. The outcomes of these research works can provide national and local authorities with useful information for the implementation of integrated monitoring systems in the areas most affected by land subsidence.

Little Elf: A Celebration of Harry Langdon Chuck Harter & Michael J. Hayde Harry Langdon, a comic who appeared in Vaudeville, silent movies, and sound film comedies, held a unique position in Hollywood history. After a slow start in movies, he joined Keystone, the famous Mack Sennett studio. Langdon's screen character was quite different from the broad slapstick that was popular at the time. When paired with director Frank Capra in films such as *The Strong Man* (1926), *Tramp, Tramp, Tramp* (1926), and *Long Pants* (1927), he rivaled Charlie Chaplin, Buster Keaton, and Harold Lloyd. Chuck Harter and Michael J. Hayde's biography includes a comprehensive Filmography. Lavishly illustrated. "You can hear the laughter flowing through the book. Langdon's comic timing was about taking enough time to figure out a situation. The reader should do the same, and not rush through these wonderful pages." - Brad Linaweaver, *Mondo Cult* "[The authors] have done a great service for comedy aficionados and historians, offering up a cornucopia of information on every one of Langdon's screen appearances, rare photos, vintage magazine articles, and more. If you have any interest in Harry Langdon, this book is invaluable. - Leonard Maltin in *Leonard Maltin's Movie Crazy*

Zooplankton Diversity and Pelagic Food Webs Marina Manca 2021-05-04 Zooplankton are of key importance in the structure and functioning of aquatic food webs. They contribute to a large part of the functional and structural biodiversity of predator and prey plankton communities. Promptly responding to long-term and seasonal changes in the physical and chemical environment, they are sensitive indicators of patterns and mechanisms of impact drivers, both natural and human induced. In this volume, we aim to present evidence for both long-term and seasonal changes in zooplankton community structure and dynamics, investigating different approaches from population dynamics to advanced molecular techniques and reconstructing past communities from subfossil remains in lake sediments.
