World Investment Report 2020 United Nations Conference on Trade and Development (UNCTAD) 2020-07-15 The 30th edition of the World Investment Report looks at the prospects for foreign direct investment and international production during and beyond the global crisis triggered by the COVID-19 (coronavirus) pandemic. The Report not only projects the immediate impact of the crisis on investment flows, but also assesses how it could affect a long-term structural transformation of international production. The theme chapter of the Report reviews the evolution of international production networks over the past three decades and examines the configuration of these networks today. It then projects likely course changes for the next decade due to the combined effects of the pandemic and pre-existing megatrends, including the new industrial revolution, the sustainability imperative and the retreat of laissez faire policies. The system of international production underpins the economic growth and development prospects of most countries around the world. Governments worldwide will need to adapt their investment and development strategies to a changing international production landscape. At the request of the UN General Assembly, the Report has added a dedicated section on investment in the Sustainable Development Goals, to review global progress and propose possible courses of action.

Handbook of Maintenance Management and Engineering Mohamed Ben-Daya 2009-07-30 To be able to compete successfully both at national and international levels, production systems and equipment must perform at levels not even thinkable a decade ago. Requirements for increased product quality, reduced throughput time and enhanced operating effectiveness within a rapidly changing customer demand environment continue to demand a high maintenance performance. In some cases, maintenance is required to increase operational effectiveness and revenues and customer satisfaction while reducing capital, operating and support costs. This may be the largest challenge facing production enterprises these days. For this, maintenance strategy is required to be aligned with the production logistics and also to keep updated with the current best practices. Maintenance has become a multidisciplinary activity and one may come across situations in which maintenance is the responsibility of people whose training is not engineering. This handbook aims to assist at different levels of understanding whether the manager is an engineer, a production manager, an experienced maintenance practitioner or a beginner. Topics selected to be included in this handbook cover a wide range of issues in the area of maintenance management and engineering to cater for all those interested in maintenance whether practitioners or researchers. This handbook is divided into 6 parts and contains 26 chapters covering a wide range of topics related to maintenance management and engineering.

Concepts of Rehabilitation for the Management of Common Health Problems Gordon Waddell 2004 Although there is broad agreement on the importance of rehabilitation and the need to improve occupational health and vocational rehabilitation in the UK, there is considerable uncertainty about what 'rehabilitation' is, and about its cost-effectiveness, particularly for the common health problems that cause most long-term disability and incapacity. This paper seeks to develop a theoretical and conceptual basis for the rehabilitation of common health problems. Chapters include: traditional rehabilitation and the need for a different approach; illness, disability and incapacity for work; the biopsychosocial model and framework of disability; obstacles to recovery and return to work; clinical and occupational management of common health problems; personal responsibility and motivation; and rehabilitation in a social security context.
