Management for Child Health Services Norman T. Begg 2013-12-20 The provision of health care services for children is central to improving the nation's health and remains a key feature of every government's policy. This concept has been recognised in the United Kingdom since nineteenth century visionaries prompted increasing interest in the welfare of the country's school children. Successive generations have built upon these foundations and have been diligent in promoting effective service development. It is right that we follow their example, for the young have only one chance of a healthy upbringing. They are totally dependent on others to provide the right services, which are sensitive enough to address individual needs, yet sufficiently comprehensive to enable as many children as possible to reach adulthood with their potential uncom promised by illness. Our objective must be to enable today's children to enjoy a healthy childhood and to equip them to maximise the benefits of a healthy lifestyle in the years to come. We are making an essential investment in the future and must appreciate the challenges which come with that commitment. We need a multi-professional approach, positive management skills and the adoption of good management practice. I therefore welcome this book on managing child health services and commend the initiative of its editors in bringing together such an impressive team of contributors from different disciplines.

Effective Complex Project Management Robert Wysocki 2014-09-16 “Robert Wysocki does it again, and again. He has evolved from a project management expert and guru to the preeminent thought leader on managing complexity in the 21st century! Wysocki’s approach is to use an adaptive framework and decision-making tool which includes a robust project management methodology that seamlessly integrates change, and can be applied to all types of projects across industries. This adaptive complex project framework is aligned with the most contemporary principles of innovation, agility, and lean approaches to change, and represents the most advanced thinking in applied complex project management to date.” –Kathleen Hass, Project Management and Business Analysis Practice Leader, Consultant, and PMI award-winning author of *Managing Complex Projects: A New Model* With technology continuing to invade the business world and the convergence of complexity, uncertainty, and constant change, a whole new class of projects has emerged for which traditional project management models such as Waterfall are totally insufficient. These are called complex projects. Extreme Project Management models and a variety of Agile Project Management models such as Scrum, Rational Unified Process, Feature-Driven Development, and Dynamic Systems Development Method have emerged, but project failure rates have not been measurably reduced. *Effective Complex Project Management* offers a proven solution to managing any project that must succeed in the face of organizational complexity and market uncertainty, in the form of an adaptive complex project framework. Developed, refined, and validated through 20+ years of client experiences and feedback from project management thought leaders, this framework and robust methodology has demonstrated a favorable impact on project and program management success rates. Dr. Wysocki demonstrates that for program and project managers to be consistently successful in managing complex projects, they need to include in their project management portfolio of processes an adaptive framework that continuously analyzes and adapts to changing and modifying conditions even to the point of changing project management models mid-project. The author’s adaptive complex project framework is currently the only robust tool to offer an orderly approach to do just that. When applied and managed correctly, this intuitive framework that proceeds from ideation to set-up to execution has proven to deliver on the purpose of programs and projects without fail, in the form of desired

business value.

ECKM2014-Proceedings of the 15th European conference on Knowledge Management Carla Vivas 2014-10-01 The world economy in which we are living poses challenges that lead to a realization that 'more of the same' will be difficult to sustain. This provides an illustration that, in order to create new or modified knowledge practices, strengthen customer relationships and thus positively influence customer satisfaction, organizations must be flexible in configuring (combining) knowledge and knowledge structures in a way that is appropriate for delivering value to the customer. It must simultaneously develop effective strategies for updating the knowledge of its staff members necessary for underpinning the creation and delivery of appropriate knowledge services. Thus, unlearning (forgetting) becomes a critical means for organizational success. The ECKM community of scholars has already initiated dialogue that links its particular strengths to innovation issues. This conference aims to further that dialogue by attracting leading edge work that leverages the ECKM community's in-depth understanding of learning and unlearning to better understand knowledge management. Our aim is to stimulate breakthrough research streams linking learning, unlearning and knowledge management. How can organizations tailor, use, and extend techniques and tools from knowledge management for improving their business practices and processes? Building upon existing work on knowledge management (KM) and organizational learning, the conference will promote interdisciplinary approaches from computer science and information systems, business, management and organization science as well as cognitive science. Emphasis will be put on systematic learning from experience, KM tools and KM success factors. A special interest belongs to knowledge management initiatives which are lightweight (i.e., do not place considerable additional burden on users and KM experts), allow an incremental adoption (i.e., do not require large up-front investment before any return of investment is at least visible), and are flexible regarding frequent changes in experts and topics. Continuing the success of the ECKM conference series since 2000, the 2015 conference will provide an international communication forum bringing together academia and industry for discussing the progress made and addressing the challenges faced by continuous learning in knowledge-intensive organizations.
