*Unworthy* Anneli Rufus 2014-05-15 "Self-loathing is a dark land studded with booby traps. Fumbling through its dark underbrush, we cannot see what our trouble actually is: that we are mistaken about ourselves. That we were told lies long ago that we, in love and loyalty and fear, believed. Will we believe ourselves to death?" —from *Unworthy* As someone who has struggled with low self-esteem her entire life, Anneli Rufus knows only too well how the world looks through the eyes of those who are not comfortable in their own skin. In *Unworthy*, Rufus boldly explores how a lack of faith in ourselves can turn us into our own worst enemies. Drawing on extensive research, enlightening interviews, and her own poignant experiences, Rufus considers the question: What personal, societal, biological, and historical factors coalesced to

spark this secret epidemic, and what can be done to put a stop to it? She reveals the underlying sources of low self-esteem and leads us through strategies for positive change.

*Land Use Competition* Jörg Niewöhner 2016-07-29 This book contributes to broadening the interdisciplinary knowledge basis for the description, analysis and assessment of land use practices. It presents conceptual advances grounded in empirical case studies on four main themes: distal drivers, competing demands on different scales, changing food regimes and land-water competition. Competition over land ownership and use is one of the key contexts in which the effects of global change on social-ecological systems unfold. As such, understanding these rapidly changing dynamics is one of the most pressing challenges of global change research in the 21st century. This book contributes to a deeper understanding of the manifold interactions between land systems, the economics of resource production, distribution and use, as well as the logics of local livelihoods and cultural contexts. It addresses a broad readership in the geosciences, land and environmental sciences, offering them an essential reference guide to land use competition.

*With God in the Crucible* Peter Storey 2010-09-01 Often the church

is accused of being so embedded in the culture that effective prophecy leveled at the culture is impossible. But this book illustrates that there was a time and a place where the church community was faithful to its mission as the body of Christ, as church leaders led, people lifted high the cross, and they marched into the uncertainty that still prevails. Here is a time and place where the call to risky discipleship was answered not with whimpers, whines, and excuses, but with the power of faithful Christians living out their call. This book illustrates what it can mean to faithfully answer the call to discipleship and God's service. Many people wonder if they would be able to stand up for their faith if it meant great personal sacrifice or the sacrifice of people they love. They wonder what they would risk for their faith, if anything. In the United States where cost/benefit analysis is a popular way to assess risk, many Christians wonder if they might not have to stand alone, because too many see the risks as too costly. As suggested by the title, this book draws upon a collection of sermons and addresses given by Peter Storey in a variety of contexts between 1966 and 1993. The original audiences ranged from the all-white Central Methodist Church in Johannesburg, to the South African Council of Churches, to the nation of South Africa, and to the world. All of these sermons and addresses are directly related to specific historical events: security police confrontations, beatings, and tear-gassings in churches around the country of South Africa; an imposed State of Emergency; the murder of 14-year-old Stompie Sepie by Winnie Mandela's thugs; and the violent jockeying for power between Mandela's African National Congress, Chief Mangosutho Buthe's Inkatha Movement, and F. W. de Klerk's regime. The book offers the full perspective of what it means to speak truth, empower people to stand for the truth, and to pastor souls during times when living truth seems almost impossible. Key Features: 1. Foreword by Desmond Tutu 2. 15 chapters, each including a brief description of the original context, the sermon and its connection with the

present, and a prayer 3. Epilogue by Will Willimon

Irishness and Womanhood in Nineteenth-century British Writing  
Thomas J. Tracy 2009 Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

*Civil Engineering and Symmetry* Edmundas Kazimieras Zavadskas 2019-06-14 A topic of utmost importance in civil engineering is finding optimal solutions throughout the life cycle of buildings and infrastructural objects, including their design, manufacturing, use, and maintenance. Operational research, management science, and optimization methods provide a consistent and applicable groundwork for engineering decision-making. These topics have received the interest of researchers and, after a rigorous peer-review process, eight papers have been published in this Special Issue. The articles in this Printed Edition demonstrate how solutions in civil engineering, which bring economic, social, and environmental benefits, are obtained through a variety of methodologies and tools. Usually, decision-makers need to take into account not just a single criterion, but several different criteria and, therefore, multi-criteria decision-making (MCDM) approaches

have been suggested for application in five of the published papers; the rest of the papers apply other research methods. Most approaches suggested decision models under uncertainty, proposing hybrid MCDM methods in combination with fuzzy or rough set theory, as well as D-numbers. The application areas of the proposed MCDM techniques mainly cover production/manufacturing engineering, logistics and transportation, and construction engineering and management. We hope that a summary of the Special Issue as provided here will encourage a detailed analysis of the papers included in the Printed Edition.
